

Opener: Open Partitioning Embedding for Named Entity Recognition

Anonymous Author(s)

Paper submitted for double-blind review

LyRIDS Symposium 2026

Abstract

This paper introduces **Opener**, an open Named Entity Recognition pipeline that combines a frozen mention detector, a Matryoshka-truncatable embedding space, and per-label Gaussian Mixture Models initialized on anchor words. *[Placeholder — to be rewritten once results are in.]*

Index Terms

named entity recognition, open NER, Matryoshka embeddings, Gaussian mixture models, semi-supervised clustering, out-of-distribution detection

I. INTRODUCTION

[Placeholder — introduction to be written.]

II. RELATED WORK

[Placeholder — related work to be written.]

III. METHOD

[Placeholder — method to be written.]

IV. EXPERIMENTS

[Placeholder — experiments to be written once results are available.]

V. CONCLUSION

[Placeholder — conclusion to be written.]

ACKNOWLEDGMENTS
